20/415 NAIL POLISH UREA CAP JAKARTA UREA WHITE SMOOTH

This nail-polish closure pairs a defined specification with practical manufacturing and consumer-use considerations. The 20/415 designation should be verified dimensionally because nominal finish names do not guarantee identical sealing behavior. Appropriate markets can include nail lacquer, treatment, color cosmetics, and professional salon programs. Final approval should follow closure-fit testing, seal evaluation, decoration review, and shipping trials. The objective is a package that feels intentional at every point of use.
