20/415 TREATMENT PUMP SHINY GOLD/WHITE/CLEAR HOOD

This treatment pump pairs a defined specification with practical manufacturing and consumer-use considerations. The format can serve serums, facial concentrates, scalp care, and targeted treatments. The 20/415 designation should be verified dimensionally because nominal finish names do not guarantee identical sealing behavior. Verify function over the expected use cycle, including storage orientation and shipping conditions. The objective is a package that feels intentional at every point of use.
