CAP FOR PETG ROLL ON BOTTLES

The Cap for PETG Roll On Bottles, PackagingBuyer Part 113230, gives product teams a clearly specified roll-on packaging component for commercial development. Likely development programs include deodorant, fragrance, essential oils, topical treatments, and sun care. Ball clearance must allow smooth wet-out without creating leakage, drag, or excessive product delivery. Line trials and repeated-use testing should precede final dip-tube, actuator, or fitment specifications. This keeps sourcing decisions tied to measurable package requirements.
